Reading Guide

Based on a bibliometric search conducted on the academic search engine *Google Scholar*TM, we were able to analyze the evolution of the annual scientific output of **Transit-Oriented Development** (TOD), **micromobility**, and **their association** (B-TOD or M-TOD), since the formalization of the planning concept in 1993. It appears that, despite the overall trend of **increasing international scientific publications** across all subjects, the number of works on the first two research topics shows a relatively sharper rise. Since 2023, these figures have **doubled** in just **ten years** and **three years**, respectively. In contrast, the trend curve for intermodality shows only **slight variations**.
