

Reading Guide

The modeling of the **318 stations and their respective catchment areas** resulted in the analysis of **1,272 distinct station neighborhoods**, based on 40 independent indicators and 6 dependent indicators. **288 typologies** emerge from this model, depending on **the geographical scope** (*PI*, *PB*, *CI*, and *CB*), **the time period** (*RT1*, *RT2*, *RT3*, *RT4*, *RT5*, and *RT6*), **the weighting** of the 40 indicators (equal weight, IEW, and questionnaire), and *the clustering method* (*K-means*, *AGNES*, and *GMM*).
