Subsample: 202 réponses (females and males, all types of modes of transportation)

The intermodal practices examined in the questionnaire are marked by **an age effect** or **a generational effect**, with a higher representation of young travelers, of all genders, aged **between 22 and 35 years**. However, the landscape of users of light individual mobility is also depicted by the determination of a second group of individuals, aged **between 42 and 50 years**. On the other hand, it is worth noting that this age group shown in the graph is **only valid for men**.
